The result of a 2-year research study funded under the National English Literacy Demonstration Program for Adults of Limited English Proficiency, this handbook on adult English-as-a-Second-Language (ESL) literacy education represents a synthesis of ideas derived from various sources. It is meant as a resource for teachers who have some experience in teaching but are new to ESL literacy. It contains the following nine chapters: (1) "Adult ESL Literacy: State of the Art," which discusses some of the special features of adult ESL literacy; (2) "Approaches and Materials," which maintains that meaning-based approaches show the greatest promise in helping adults develop full literacy; (3) "Teaching Adult ESL Literacy in the Multilevel

Classroom,\" which shows that group work is the most effective strategy for dealing with multilevel classrooms; (4) \"Using Computer and Video Technology in Adult ESL Literacy,\" which discusses the pros and cons of using technology in ESL literacy teaching; (5) \"Native Language Literacy,\" which demonstrates that using the native language of the learners is a viable approach to introducing literacy to adults who are not literate in their first language; (6) \"Learner Assessment,\" which shows that program-based assessments are superior to standardized tests; (7) \"Curriculum,\" which demonstrates that curriculum decisions are value decisions that mirror a program's philosophy; (8) \"Staff Development and Program Issues,\" which holds that effective staff development should focus on the social context, adult learning, second language acquisition, literacy development, and effective teaching processes; and (9) \"Curriculum Modules,\" which presents 10 teaching units that demonstrate meaning-based teaching. Cities are both real and imaginary places whose identity is dependent on their distinctive heritage: a network of historically transmitted cultural resources. The essays in this volume, which originate from a lecture series at the Institute of Germanic & Romance Studies, University of London, explore the complex and multi-layered identities of European cities. Themes that run through the essays include: nostalgia for a grander past; location between Eastern and Western ideologies, religions and cultures; and the fluidity and palimpsest quality of city identity. Not only does the book provide different thematic angles and a variety of approaches to the investigation of city identity, it also emphasizes the importance of diverse cultural components. The essays presented here discuss cultural forms as various as music, architecture, literature, journalism, philosophy, television, film, myths, urban planning and the naming of streets.

In recent times what has become known as \"the case of Medellín \" has generated a growing interest in the international community. These urban transformation that Medellín has experimented have become a focus of attention and reference for experts in many fields, around the world. The book ?Medellin: Environment, Urbanism and Society ?, that now published the Center for Urban and Environmental Studies, Urbam, of EAFIT University is a testimony of the value given by our culture to the accomplishments of the city, to the idea of the public sphere and the growing relationship between the technical sphere and the political sphere, understood in the broad sense as a form of disciplinary knowledge and construction of civil society. This book brings together a knowledge of the city from multiple perspectives; knowledge that is, without any doubt, impressive for its extension and profundity, as well as for its capacity to combine objective data with conceptual reflections about the scope and impact of the different perspectives concerning the theme of urban transformation and the different actors that have participated in such processes. The book weaves a broad net over the city, its history and development, adopting a multidisciplinary vision. I think that this will be the first step in creating a speech that might finally liberate itself from the strict disciplinary boundaries, building a trans-disciplinary perspective that can amplify the urban dimension of the city. This is the beginning of a profound and complex reflection that is, at the same time, a project of knowledge and an instrument of action and participation.

This book examines planning education provision and approaches globally, through a comparative and longitudinal perspective. It explores the emergence of planning education in the 20th century, with its rich variation and yet a remarkable degree of cross-fertilization. Each of the sections of the book is framed by an overview essay which has been prepared by the editors to provide the reader with a critical exposure to relevant scholarship drawing on the detailed case studies and exploratory essays on key issues in planning education. The first part of this volume focuses on the emergence of planning education programs in the twentieth century as a way to understand the current planning education environment. Then we explore how education in urban, regional and spatial planning has developed in different ways in different countries and continents. The final part of this volume aims to envision how planning can adapt and develop to remain relevant to the development of human environments in the 21st century. Urban planning education has become a pervasive practice throughout the world as urbanization and development pressures have increased over the past half century, and as demand increased for professional trained experts to guide those processes. The approaches vary widely, based in part upon the discipline from which the planning program developed as well as the context-specific challenges within the country or region where the program resides.

This instant gold standard title is a major contribution to the field of clinical medical ethics and will be used widely for reference and teaching purposes for years to come. Throughout his career, Mark Siegler, MD, has written on topics ranging from the teaching of clinical medical ethics to end-of-life decision-making and the ethics of advances in technology. With more than 200 journal publications and 60 book chapters published in this area over the course of his illustrious career, Dr. Siegler has become the pre-eminent scholar and teacher in the field. Indeed his work has had a profound impact on a range of therapeutic areas, especially internal medicine, pediatrics, surgery, oncology, and medical education. Having grown steadily in importance the last 30 years, clinical ethics examines the practical, everyday ethical issues that arise in encounters among patients, doctors, nurses, allied health workers, and health care institutions. The goal of clinical ethics is to improve patient care and patient outcomes, and almost every large hospital now has an ethics committee or ethics consultation service to help resolve clinical ethical problems; and almost every medical organization now has an ethics committee and code of ethics. Most significantly, clinical ethics discussions have become a part of the routine clinical discourse that occurs in outpatient and inpatient clinical settings across the country. This seminal collection of 46 landmark works by Dr. Siegler on the topic is organized around five themes of foundational scholarship: restoring and transforming the ethical basis of modern clinical medicine, the doctor-patient relationship, education and professionalism, end-of-life care, and clinical innovation. With introductory perspectives by a group of renowned scholars in medicine, *Clinical Medical Ethics: Landmark Works* of Mark Siegler, MD explains the field authoritatively and comprehensively and will be of invaluable assistance to all clinicians and scholars concerned with clinical ethics.

This popular and influential work, translated here into English for the first time, argues that modern urbanism has upset the morphology of cities, abolished their streets and isolated their buildings. In tracing the stages of this transformation, this book presents the view that the urban tissue, the intermediate scale between the architecture of buildings and the diagrammatic layouts of town planning, is the essential framework for everyday life. Only by investigating the urban tissue will it be possible to understand the complex relationships between plot and built form, between streets and buildings and between these forms and design practices. The chosen trail of the first French edition - Paris, London, Amsterdam, Frankfurt - is one of continuously evolving modernity. It outlines a history, which, in one century (1860-1960), completely changed the aspect of our towns and cities and transformed our way of life. The shock has been such that we are still looking for answers, still attempting to find urban forms that can accommodate present day ways of life and at the same time maintain the qualities of the traditional town. This English edition brings the story forward to the present day and considers the impact of the New Urbanism in the United States, which, over the last decade, has sought to re-establish former relationships within the urban tissue.
